What is Appetize?

Appetize is a food review web application that enables you to search for restaurants based on location, sort by “buzz” (most talked about) and review your favourite restaurant.

AJAX Techniques Implemented

Multistage
downloading

Predictive
fetch

Submission
Throttling

Periodic
Refresh

XMLHttpRequest

External Libraries Used

- React
- Reactstrap
- Bootstrap
- Material UI
- MongoDB
- Shiny package with R

ML/AI Component

- Food Image Recognition
- A small photo icon on the bottom left of the homepage takes you to a site wherein, if you do not know the name of a food item, we harness a Machine Learning algorithm to allow the user to find out the food item automatically
- Technologies used: Keras, Shiny with R

THE BUZZ

- Find out what the trending places are right now
- This page presents a collection of the top nine restaurants at the moment, and is ranked based on the number of comments for that page
- Buzz refers to the amount of people talking about a particular restaurant, hence we use the number of comments as a measure
- Predictive fetch has been used while scrolling to act as a performance improvement
